Mathematical Summary Writing

Summary Writing on Smaller Scope

Paragraph Based Ones

Smallest Scope

Sample 1

Main Text: "Solar power adoption is surging globally. Innovations in battery storage are solving the consistency issue of renewable energy. Homeowners used to rely solely on the grid for power needs. Now, solar panels allow individual households to generate and store their own electricity."

LearnEng with Shahan
Your English Planet

Summary Text: 'Surging solar adoption and better storage are enabling homeowners to generate their own power, reducing grid reliance.'

Freehand Writing Practice Sheet
Sample 2

Main Text: "The professional landscape is shifting toward flexibility. Video conferencing tools have bridged the gap between home and office. Companies maintained physical headquarters for decades to ensure employee productivity. Today, digital platforms allow teams to collaborate effectively from any location."

Summary Text: 'A shift toward flexible remote work, supported by digital collaboration tools, is replacing the traditional need for physical offices.'

Sample 3

Main Text: "Machine learning is transforming healthcare diagnostics. Algorithms can now analyze medical images with incredible speed and accuracy. Doctors spent years training to spot subtle patterns in X-rays manually. AI assistants provide a second set of eyes that can process thousands of scans instantly."

Summary Text: 'AI is revolutionizing healthcare by analyzing medical scans faster and more accurately than traditional manual methods.'

Do it Yourself

Sample 4: Urban Gardening

Main Text: "Vertical farming is changing how cities produce food. Hydroponic systems allow crops to grow in climate-controlled indoor environments. Urban areas imported most of their produce from distant rural farms for a century. Modern vertical farms bring fresh organic vegetables directly into the heart of the city."

Summary Text: ...

Sample 5: Space Exploration

Main Text: "Commercial space travel is becoming a reality. Private aerospace companies are developing reusable rockets to lower launch costs. National agencies were the only entities capable of reaching orbit for many years. Reusable technology now makes frequent trips to space accessible for private citizens and researchers."

Summary Text: ...

Freehand Writing Practice Sheet
Solution to Sample 4 & 5

Summary Text 4: 'Vertical farming uses indoor hydroponics to bring fresh produce to cities, reducing the need for long-distance food transport.'

Summary Text 5: 'Reusable rocket technology from private companies is lowering costs and making space travel accessible beyond national agencies.'

Mid-Length Para Scope

Practice 1:

Main Text:

"Bees play a vital role in our ecosystem by pollinating flowers and crops. In recent years, honeybee populations have declined due to habitat loss and pesticides. To combat this, urban gardeners are planting wildflower meadows on their rooftops. These small green spaces provide essential food sources for bees in busy metropolitan areas."

Summary Text:

City gardeners are planting rooftop wildflowers to help save declining bee populations by providing necessary food.

Practice 2

Main Text:

"Plastic pollution in the ocean has reached crisis levels, affecting marine life from tiny plankton to giant whales. Much of this waste comes from single-use items like straws and grocery bags. Consequently, several coastal nations have passed laws banning these plastics entirely. These governments hope that by reducing waste at the source, they can protect the health of the sea."

Summary Text:

Coastal countries are banning single-use plastics to reduce ocean pollution and protect diverse marine life.

Practice 3

Main Text:

"The Great Depression of the 1930s left millions of Americans without work or homes. In response, President Franklin D. Roosevelt created the Civilian Conservation Corps (CCC). This program employed young men to plant trees and build trails in national parks. By providing jobs and restoring the environment, the CCC helped stabilize the nation during a period of economic ruin."

LearnEng with Shahan

Freehand Writing Practice Sheet

Summary Text:

The CCC program helped the US recover from the Great Depression by employing men for environmental conservation projects.

Do it Yourself

Practice 4

Main Text:

"Artificial Intelligence is transforming the field of medicine by analyzing complex data faster than human doctors. Specifically, new algorithms can detect early signs of cancer in X-rays with high accuracy. While these tools do not replace physicians, they act as a second set of eyes. This collaboration between technology and doctors leads to earlier diagnoses and better patient outcomes."

Freehand Writing Practice Sheet
Practice 5

Main Text:

"Economists often debate the merits of 'Universal Basic Income' (UBI) as a solution to job displacement caused by automation. Critics argue that giving citizens a fixed monthly stipend might discourage people from seeking employment. However, proponents suggest that UBI provides a necessary safety net that allows individuals to pursue education or entrepreneurship. This financial security could fundamentally reshape the modern labor market."

Solution to Sample 4 & 5

Summary Text:

Medical AI tools assist doctors by accurately analyzing data to detect diseases like cancer earlier than before.

Summary Text:

The debate over UBI centers on whether guaranteed income discourages work or enables productive new opportunities in an automated economy.

Normal Para Scope

Exercise 1

Main Text:

"Urban gardening has become a popular trend for city dwellers who want to grow their own food despite limited space. By using balconies, rooftops, and community plots, individuals can cultivate fresh vegetables and herbs. This movement does more than just provide healthy produce; it reduces carbon footprints by cutting down on food transportation and fosters a sense of community among neighbors. As people share seeds and advice, these small green spaces transform concrete jungles into vibrant, sustainable ecosystems."

Summary Text:

Urban gardening allows city residents to grow food in small spaces, providing fresh produce while simultaneously helping the environment and building stronger community ties.

Exercise 2

Main Text:

"Coding bootcamps have reshaped the landscape of technical education by offering intensive, short-term programs designed to bridge the skills gap in the tech industry. Unlike traditional four-year degrees, these camps focus exclusively on practical, job-ready skills like web development and data science. While the pace is grueling, the high placement rates suggest that this model is effective for career changers. However, critics argue that the lack of foundational theory might limit long-term growth, making continuous self-learning essential for graduates."

Summary Text:

Coding bootcamps offer a fast, practical alternative to traditional degrees for entering the tech industry, though graduates must commit to ongoing self-education to compensate for a lack of deep theoretical foundation.

Exercise 3

Main Text:

"The restoration of seagrass meadows is increasingly recognized as a vital tool in the fight against climate change. These underwater ecosystems are remarkably efficient at carbon sequestration, capturing carbon dioxide up to 35 times faster than tropical rainforests. Beyond carbon storage, seagrasses act as natural buffers that protect coastlines from erosion and provide critical nurseries for marine biodiversity. Despite their value, they are disappearing at an alarming rate due to water pollution and coastal development, prompting global conservationists to prioritize their protection and replanting."

Summary Text:

Restoring seagrass meadows is a critical environmental priority because they capture carbon far more efficiently than forests and protect coastlines, despite being currently threatened by pollution and development.

Do it Yourself

Exercise 4

Main Text:

"The concept of a Circular Economy represents a fundamental shift from the traditional 'take-make-waste' linear model. In a circular system, products and materials are designed for durability, reuse, and recycling, ensuring that resources remain in the productive loop for as long as possible. This approach aims to decouple economic growth from the consumption of finite resources. While the transition requires significant initial investment in infrastructure and a total redesign of supply chains, proponents argue that the long-term gains—including reduced waste management costs and increased resource security—are indispensable for a sustainable global economy."

Summary Text:

(Practice Area: Condense the transition from linear to circular models while noting the required systemic changes.)

LearnEng with Shahan
Freehand Writing Practice Sheet
Exercise 5

Main Text:

"The digital divide remains a significant barrier to global equity, as access to high-speed internet becomes synonymous with access to basic rights like education, healthcare, and political participation. In many developing regions, the high cost of infrastructure and the lack of digital literacy prevent marginalized populations from participating in the modern economy. Governments and NGOs are now looking beyond mere connectivity, focusing instead on 'meaningful access.' This involves not just providing a signal, but ensuring devices are affordable and that users possess the critical thinking skills to navigate online information safely. Without a holistic approach to digital inclusion, the gap between the hyper-connected and the disconnected will continue to exacerbate existing socioeconomic disparities."

Summary Text:

(Practice Area: Identify the shift from 'simple connectivity' to 'meaningful access' and the consequences of failure.)

Solution to Sample 4 & 5

4.

Model Summary: The Circular Economy seeks to replace the wasteful linear model with a sustainable system of reuse and recycling, requiring a major infrastructure overhaul to ensure long-term resource security and economic growth.

5.

Model Summary: Bridging the digital divide now requires moving beyond simple internet connectivity toward "meaningful access," ensuring that marginalized populations have the affordable tools and literacy skills needed to prevent worsening global inequality.
